

# Proof of Product

GRDC licensee HELP International has carried out large scale testing of the system in ten prominent floating nursery forms over the past decade including: constructed plastic lined shallow canals, dug-outs, natural sloughs, road ditches, plastic lined troughs, down-hill weir nursery systems and many portable nursery options. Licensee HELP currently maintains a 1,000,000 tree floating nursery near Weyburn, SK., Canada using dug-outs and plastic lined shallow canals. The trees are utilized in HELP's tree sales across the three prairie provinces and for contract plantings carried out by HELP on over 500 municipal, crown corporation and private properties.
